The Decabillionaire Pace: 400,000x Return Model

Classification: STRICTLY CONFIDENTIAL

The Math

Goal: $25K → $10B (decabillionaire)

Path: 1% equity at $1T exit valuation

The only way this works: FarmSense becomes the **global water infrastructure standard** — the AWS of agriculture.

$25K investor: $27M (1,080x return)

To hit decabillionaire ($10B):

Exit valuation must be: **$37B**

Or founder stake must stay: **27%+** with earlier exit

The 400,000x Path

Option 1: Mega-IPO ($50B)

Apple of agriculture

40M acres under management

12% global irrigated land

Founder stake: 20% = $10B

Option 2: Strategic Sale ($30B)

Deere, Nutrien, or sovereign wealth

25M acres, 8% global

Founder stake: 33% = $10B

Option 3: Dividend Empire

Never exit

$200M/year dividends by 2036

Compound to $10B over 20 years

The Honest Assessment

Probability of $10B exit: 5-10%

Probability of $1B exit: 25-30%

Probability of $100M exit: 60-70%

Probability of failure: 30-40%

The difference: Operational execution at hyperscale.

The path to decabillionaire status requires: (1) flawless execution, (2) massive capital access, (3) regulatory capture, (4) operational hyperscale, (5) exit timing. Any single failure breaks the chain.

But if it works — $25K becomes $10B, and FarmSense becomes the infrastructure layer for global water security.
